NEXT STEPS

Where this goes from here

1. Review together

Walk this deck (or the live clickable version) screen-by-screen on a call — flag anything that should change before build starts.

2. Confirm scope order

Screen_Inventory.xlsx's Priority/Phase columns set the build order — Must + Pilot screens first, per the Figma_Handoff_Brief.docx sequencing.

3. Engineering handoff

Design_System_Visual_Language.docx carries every colour, type and spacing token this catalogue was built from, ready for implementation.

4. Open items

Marking-review staffing, final OSA legal opinion, and per-school DPA contracts remain outside this design pass — see Project_Open_Items_Tracker.xlsx.

Study Loop is a placeholder demo name only, not a decided product name. This document and its companion live prototype were built from Screen_Inventory.xlsx, Design_System_Visual_Language.docx and Figma_Handoff_Brief.docx — Karsaaz Solutions, 14 September 2026.
